

30-Day Agent Eval Rollout Plan

A practical rollout calendar for going from ad hoc agent testing to a baseline, challenge pack, and first CI gate.

BEST NEXT STEP

Turn answers into a challenge pack and gate.

Week 1: Pick The Wedge

- 1 Choose one workflow with visible business impact and recurring failures.
- 2 Collect 20 to 50 real examples from tickets, repos, support cases, or operations logs.
- 3 Name the release owner and review committee.

Week 2: Freeze The Pack

- 1 Turn examples into a versioned challenge pack with expected outputs and scorers.
- 2 Record the current production baseline.
- 3 Agree on correctness, cost, latency, and evidence expectations.

Week 3: Compare Candidates

- 1 Run baseline, candidate, and any vendor agent under the same constraints.
- 2 Review replay for every critical fail.
- 3 Update scorers where the committee finds ambiguous evidence.

Week 4: Gate The Release

- 1 Commit the gate manifest and wire it into CI.
- 2 Publish the first decision readout with links to scorecards and replay.
- 3 Schedule the first regression promotion review.

How to use this in AgentClash

Pick one workflow, freeze it as a challenge pack, record a baseline run, compare the candidate under the same tools and budget, then promote critical misses into CI release gates.
