

Agent Release Gate Worksheet

A one-page worksheet for translating eval results into ship, warn, or block rules your CI pipeline can enforce.

AUDIENCE

Platform engineering and release owners

USE IN

12 min

BEST NEXT STEP

Turn answers into a challenge pack and gate.

Decision Inputs

- 1 Baseline run ID and refresh rule.
- 2 Candidate deployment, model alias, tool policy, and sandbox image.
- 3 Challenge pack version and owner.

Thresholds

- 1 Correctness regression budget by challenge family.
- 2 Maximum cost per successful task.
- 3 Latency and time-to-first-token ceilings for user-facing paths.

Automatic Blocks

- 1 Security policy violation or unapproved tool call.
- 2 Missing replay evidence for a critical task.
- 3 Malformed final output in a schema-bound workflow.

CI Handoff

- 1 Attach gate JSON, scorecard JSON, and replay links to every release PR.
- 2 Document the exception owner, expiry date, and follow-up pack update.
- 3 Make the gate nonzero when a block rule fails.

How to use this in AgentClash

Pick one workflow, freeze it as a challenge pack, record a baseline run, compare the candidate under the same tools and budget, then promote critical misses into CI release gates.
